

MATHEMATICS INTENT

- At The Friars Primary School, we are committed through the National Curriculum to allow pupils to become fluent in the fundamentals of mathematics. We intend for our pupils to have varied and consistent practise with key arithmetic skills and understanding of maths at a conceptual level.
- We want our pupils to have varied and supportive opportunities to develop their problem solving skills, following lines of enquiries, using mathematical reasoning and finding creative solutions.
- Overall, we want our pupils to recall and understand key knowledge at an increasingly rapid rate –as through this key knowledge it will unlock their ability to think mathematically through more complex problems in their lifetime. We want pupils within The Friars Primary School to have a full and confident understanding of mathematical vocabulary and concepts by the time they leave us.
